

Tensium Plus - AAR Approved

Polyester Strap

Tensium plus is a highly engineered product made with high quality raw materials. It is ideal for medium to heavy-duty strapping applications – with the same economic benefits – combines the performance properties of both steel and plastic strapping to form a stronger, more resilient strapping material. Tensium plus is a viable alternative for steel strapping in many heavy-duty baling, bundling, palletizing and unitizing applications. Its elongation and recovery characteristics help strap stay tight and absorb impacts without breaking. It is easy to handle, has an economical advantage over steel, and is anti-corrosive thus providing maximum practicality and safety to the handler. It is completely recyclable, which reduces packaging waste and saves money on disposal costs.
